

Instrumented
dual mass flywheel for
torque measurement

Modified pulley with
telemetry for torque
measurement

Torque measurement
system installed
on drive shaft

Instrumented clutch
assembly prepared
for temperature
measurement

Automotive Testing

High performance telemetry solutions for measurement of physical parameters on rotating automotive components e.g.:

- Torque and torsional vibration in drive shafts
- Torque on dual mass flywheels and flex plates
- Temperature, torque, force and pressure in transmissions, gears and engine components
- Temperature in clutches, automatic transmissions, brake disks and tires
- Torque on pulleys and A/C compressors
- Vibration on torsional vibration dampers and power train components

Systems of highest reliability for use in applications with severe operating conditions.
Suitable for R&D, component test stands as well as test track applications.
